OBJECTIVE

Programmer Analyst Trainee at Cognizant with formal training in MEAN stack development (MongoDB, Express.js, Angular, Node.js) and practical experience building full-stack web applications and AI-integrated platforms. Proficient in TypeScript, JavaScript, and RESTful API design, with a strong engineering foundation in Data Structures and Algorithms, Object-Oriented Programming (OOP), and database management

Programming Languages	JavaScript, TypeScript, Java, SQL
Frontend Technologies	Angular (Signals / Standalone), HTML5, CSS3, React.js
Backend Technologies	Node.js, Express.js, RESTful APIs, JWT Authentication
Database	MongoDB, PostgreSQL, Mongoose
Version Control System	Git, GitHub, Postman, Netlify, Render

Experience

Programmer Analyst Trainee | *Cognizant* | November 2025 – Present

- Completed intensive, enterprise-level technical training in MEAN stack web development, mastering front-end and back-end integration using Angular, Node.js, Express.js, and MongoDB.
- Developed scalable RESTful APIs and single-page applications (SPAs) following industry-standard software engineering practices, JWT authentication workflows, and modular design patterns.
- Collaborated in Agile-simulated development environments, utilizing Git/GitHub for version control, code reviews, and debugging complex client-server data flows.

EDUCATION

University of Engineering and Management September 2021 - June 2025 (8.11)
Bachelor of Technology in Computer Science

PROJECTS

CareerAI — AI-Powered Resume & Interview Prep Platform | *Angular 21, TypeScript, Node.js, Express.js, MongoDB, Groq LLM API, JWT*

- Developed and deployed a full-stack AI career platform using Angular 21 and Node.js/Express that analyzes resumes against target companies, generating ATS compatibility scores, constructive critiques, and tailored interview questions.
- Integrated the Groq LLM API (`gpt-oss-20b`) with custom prompt engineering to deliver structured, parseable JSON feedback in real time, drastically reducing user interview preparation time.
- Engineered a secure REST API implementing JWT authentication and multipart file handling for resume uploads, with MongoDB persistence and protected route architectures.
- Built a responsive Single Page Application (SPA) using Angular standalone components and reactive signals, featuring light/dark theming and dynamic analytical dashboards.
- Architected a decoupled production deployment across Netlify (frontend) and Render (backend), configuring CORS policies, SPA routing fallback, and environment-based API endpoints. [link](#)

Hospital Management System | *Angular, Node.js, Express.js, MongoDB, RESTful APIs, JWT*

- Developed a full-stack hospital management platform using the MEAN stack, streamlining patient registration, medical records handling, and resource allocation through an intuitive dashboard.
- Implemented secure authentication and authorization pipelines using JSON Web Tokens (JWT) and bcrypt password hashing, protecting sensitive patient data and endpoints.
- Engineered RESTful APIs and modular Angular services utilizing dependency injection and route guards to enforce role-based access control and prevent unauthorized navigation.
- Designed scalable MongoDB schemas using Mongoose for optimized data queries and seamless communication between client-side interfaces and server-side logic. [link](#)
